

Turn-key, tune able, and supportable:

Our turn-key solutions are installed and ready to use out of the box; however, your organization may do business slightly different than our standard use cases. This is why the RSCA solutions are built to be highly configurable. Thus your team may adjust most every feature from user roles and the related features through what is displayed without the need for custom development. Our solutions are designed to be supported long-term by your in-house ECM team. These founding concepts benefit your users with a rapidly deployed comprehensive application while also enabling your internal support team to keep the application tuned as organizational needs change. It is the best of both worlds for the user and support community – the perfect ECM solution marriage providing a solid return on investment.

Current turn-key solutions include:

RSCA turn-key ECM applications

controlSUITE

controlSUITE applications are built using OpenWorkdesk from WeWebU. The OpenWorkdesk user interface provides unparalleled end user productivity features and the ability to tailor the application without the need for custom development. This solution technique provides the best application to the end user community and contains long term support cost.

controlTRAIN

MANAGE CREATION AND USE OF TRAINING MATERIALS:

Many regulated industries need to manage procedures and associated training materials every time a plant change is implemented. Engineering and maintenance staff also provide the core expertise to update and deliver training. ControlTRAIN is a simple and productive user interface combined with flexible workflow automation to version control and secure training materials as well as route them to staff for review, update and approval.

controlHR

MANAGE EMPLOYEE FILES AND THE NEW HIRE PROCESS:

The new hire process can be a laborious and difficult to manage. With controlHR the hiring requisition process is managed via html form and approved with electronic signatures. Management can easily see the status of both requisitions and the subsequent applications with a single click. Nothing is lost, the correct forms are always used and productivity is improved. Privacy is ensured by the electronic employee file since the user role determines what documents can be viewed. The combination of the forms library, electronic member file, and process management make controlHR a complete solution for both hiring and employee management.

ABOUT RSCA:

RS Computer Associates, LLC. (RSCA) is a long term ECM and BPM solution provider specialized in IBM ECM technology. In our 17 years of experience we have delivered hundreds of solutions saving our customers millions of dollars. RSCA has leveraged our past experiences to build turn key solutions that are rapidly deployed and tailored to the user needs using advanced tools.

Besides being a ValueNet partner and a System Integration partner, RSCA is also an installation and first level support certified IBM FileNet value added reseller. We are expert in the design and deployment of ECM solutions using Document Imaging, Document Management, Web Content Management, OCR, eForms and Business Process Automation technologies. Our tool box includes a selection of third party products that round out the IBM ECM suite of products to fit nearly every business need.

Headquartered in Newark, CA. with offices in Sacramento RSCA provides ECM solutions and 7/24 support services to private and public organizations.
